

MIS

Company Profile

Increased efficiency | Complete risk management | Total transparency

MIS Marine is uniquely placed to help organisations understand the benefits that Marine Assurance can bring and the way that **vetting systems and technology can act as a game changer.**

Leading experts in Marine Assurance technology

Who are we

As the industry-leading, global provider of Marine Assurance products and solutions for the shipping and energy sectors, we are committed to providing quality systems and innovations that help improve processes and data quality. Our solutions enable organisations within the industry to work together towards the shared goal of safe, incident and pollution-free shipping.

We are Marine Assurance pioneers with unrivalled industry knowledge.

We specialise in the design, build and maintenance of cutting-edge Marine Assurance systems for the shipping and energy sectors that are purpose-designed to support safe operations, whether in cargo transportation or offshore energy, while meeting the specific requirements and risk models of global energy organisations.

Dedicated and attuned to technology, we are sector specialists that have championed the importance of Marine Assurance and provided industry focused solutions to the maritime industry for many years.

Systems and Services

With our head office in the UK, we are an engineer-led business with deep, sector-specific expertise.

We understand the vetting requirements of our customers, and deploy our technical, engineering and Data Science expertise to meet their Marine Assurance needs.

Keeping up to date with industry changes, we develop cutting-edge Marine Assurance systems that are purpose-designed to support safe and pollution free operations, while driving efficiency and performance throughout an entire supply chain.

Our Marine Assurance solutions provide organisations with the digital tools and data insights they need to make the best possible decisions, operationally, commercially, and reputationally, to support safe, clean and efficient shipping.

Dynamic, cost-effective, and transparent marine operations powered by cutting-edge technology.

Committed to quality development and innovations, our expert team pioneer world-class Marine Assurance software.

Through a focus on continuous development and a drive to improve Marine Assurance processes, our software offers a reliable, compliant and scalable, enterprise-grade system, intrinsic to the modern shipping industry.

21st Century Vetting

The nature and magnitude of the risks facing shipping do not stand still – and nor do vetting standards.

As these evolve, Marine Assurance systems must continue to progress in sophistication, not just to remain fit-for-purpose, but to constantly drive-up safety and environmental standards.

That is why we invest heavily to develop advanced Marine Assurance solutions, as well as the hands-on support to guide customers through these changes.

Our Market-leading, Flagship Product - MAINSTAY

Driving Assurance

Marine Assurance is changing.

New ways of thinking about risk need new approaches to data and technology that power effective decision making.

MIS Mainstay harnesses these new opportunities to provide far deeper insight to drive risk assessments, proactively monitoring risk right from the beginning, and throughout the whole journey - providing lasting oversight, allowing you to **understand every risk, every step of the journey**.

Driving Efficiency

Next generation Marine Assurance technology and new data now provides a multitude of advanced possibilities, allowing for a more efficient, cost effective and transparent operation; from automated decision making helping you identify the right vessel faster, to streamlining your operation through internal system and external stakeholder integration.

Supporting an entire assurance process, MIS Mainstay drives end-to-end efficiency through improved supply chain communications, system integration and data sharing – helping you to make informed decisions quickly and confidently.

The Rise of Big Data and AI

Marine Assurance is evolving. Big data and next generation technology now provides businesses with more power to improve safety, mitigate risk and drive efficiency than ever before.

The pinnacle of all computer-reliant operations, AI now plays a part in the Marine Assurance process.

Advanced analytics enhance insights, creating a detailed and constantly evolving 3D view of every situation.

Systematic risk assessments provide a clear list of warnings to focus attention on high-risk situations - efficiently maximising risk protection and performance, while minimising unnecessary rejections.

Through our catalogue of advanced Marine Assurance software and technologies, MIS Marine now supports organisations of all sizes in unlocking the power of their data.

Understanding the landscape and the challenges currently faced demonstrates significant opportunities to work together in developing Marine Assurance solutions to meet the specialist needs of the industry.

Championing Change

Marine safety
Environmental protection
Operational performance

We are passionate about the need to champion the importance of Marine Assurance within the shipping and energy sectors, to raise the standing of Marine Assurance as a business-critical discipline - an often-unsung hero of marine safety and environmental performance - and to raise the standards of Marine Assurance across the industry.

Pioneering
Systems by
Expert Minds.

Our People

We have the technology and the data, combined with the industry knowledge and experience, to offer a unique helicopter view of the shipping and energy sectors when it comes to understanding the risk factors facing shipping and energy operators.

For the past 10 years, our world-leading team has pioneered the deployment of Data Science and digital technology to meet the complex needs of Marine Assurance specialists.

We have unrivalled expertise in the application of marine data and vetting systems to support the needs of Marine Assurance teams.

Our Reach

We are a global organisation, working with clients of all sizes across Europe, the Americas, Australasia, the Middle East, Africa and Asia.

With a head office based in the UK, we have recently expanded our physical reach with colleagues now based in Argentina, South America.

The Americas is a market of great interest to MIS Marine and one where we feel we can do a lot to help energy companies, charterers and terminal operators to grow and develop within Marine Assurance. Not only with vetting systems, but also through advice on the development of assurance practices and policies to promote effective risk management while increasing operational performance.

We are proud to have worked in collaboration with key organisations and a number of energy companies at the very heart of the shipping industry, who share in the goal of continuous improvement.

We believe that appreciating and understanding the unique Marine Assurance requirements and challenges faced by each of our customers in their specific regions, provides us with the ability to share experiences and expertise, allowing us to best support to our partners and work together to further improve the Marine Assurance services and processes available.

Working together towards the shared goal of safe,
incident and pollution-free shipping
